NICHOLAS STEFFEN

SOFTWARE ENGINEER

+1 (516) 456-1214 | nicksteffen94@gmail.com | Wethersfield, CT | LinkedIn | GitHub | Portfolio

SUMMARY

Software developer with 10+ years of experience in full-stack web development, integrations, and internal tooling in SaaS environments. Skilled in API integrations, automated testing, and leveraging open-source tools. Experienced in version control best practices and collaborative workflows. Adaptable and driven by a growth mindset with strong communication skills, a focus on problem-solving, and a commitment to working effectively with cross-functional teams.

SKILLS

Languages & Frameworks	Python, Java, C++, TypeScript, Node.js, FastAPI, Flask, Next.js, React, React Native, Vue.js, Vite
Data Technologies	MySQL, PostgreSQL, MongoDB, SQLite, Redis, ElasticSearch, RabbitMQ, NoSQL, SQL, Supabase
Cloud & DevOps	Docker, Linux/Unix, Bash, Ansible, Google Cloud Platform, AWS, Vercel
Tools & APIs	REST, JIRA, JUnit, Maven, JWT, OAuth, Stripe
Methodologies	Agile, UI/UX Design, Open Source, Problem-solving, Critical Thinking, Cross-functional Collaboration

PROFESSIONAL EXPERIENCE

Lead Full-Stack Consultant
Remote

Independent Consultant
Dec 2025 – Present

- Architected a scalable, serverless backend using Supabase Edge Functions and PostgreSQL, migrating from a FastAPI prototype to optimize for performance and cost.
- Designed and implemented a custom CI/CD pipeline on Vercel with a multi-branch environment (Main, Develop, Staging, Production) to safely vet AI-assisted code contributions.
- Developed and maintained a high-performance Vite web application with feature parity and seamless data synchronization with the native iOS platform.
- Engineered core platform features including secure Supabase Authentication and a cross-platform Stripe payment integration.
- Directed technical launch operations, establishing health monitoring systems and Vercel Analytics to track performance during high-traffic events.
- Collaborated with iOS engineers to align database schema designs and backend infrastructure with mobile-specific constraints.

ClearlyRated
Remote

Software Engineer
June 2021 – November 2024

- Spearheaded a backend modernization initiative, researching and implementing the Quart framework for async capabilities (migrating from Flask), while resolving a long-standing logging issue and configuring Hypercorn for robust deployment.

- Architected a reusable Java object model for third-party API integrations, accelerating onboarding of new CRM platforms (Salesforce, Microsoft Dynamics) by enabling direct integration with existing mapping and filtering tools.
- Built internal developer tooling to containerize MySQL databases with Docker and Python scripting, producing reproducible, production-scale data environments to streamline feature development and expose scaling issues early.
- Led a research initiative to improve unit-test efficiency, identifying CI/CD bottlenecks caused by long-running tests and developing a strategic plan leveraging JUnit flows and mocks to accelerate testing cycles.
- Engineered a full-stack CSV ingestion solution (Vue.js, Java backend, MySQL) enabling users to upload, validate, and process contact data, abstracting existing backend logic for broader applicability.

Raytheon Portsmouth, RI
Software Engineer II August 2018 – May 2021

- Architected and developed a device network monitoring suite using Python and SNMP, integrating with legacy Java services via Redis to enable seamless communication.
- Led a log monitoring research initiative for mission-critical hardware against a strict 99% uptime requirement; recommended and implemented Splunk with a highly available dual-instance failover architecture.
- Developed Python API scripts for redundant data transmission to Splunk instances, and authored Ansible playbooks and Kickstart files for automated deployment across a fleet of hardware devices.

Computer Associates Inc Smithfield, RI
Software Consultant June 2016 – July 2018

- Collaborated directly with diverse clients to gather requirements and advise on solutions for customizing core ERP software.
- Led development of client-specific web applications, including a custom hardwood door configurator enabling product design, quote generation, and online sales data access, significantly enhancing client self-service.

Farsounder Warwick, RI
Software Engineer Intern May 2015 – May 2016

- Implemented C++ map overlay improvements to track GPS position and provide real-time interactive distance and angle calculations from a ship's heading, enhancing navigation capabilities.
- Developed enhancements to an internal data playback tool with tag support and hash-based dataset lookup, streamlining developer workflows for local feature testing.
- Led a research project investigating forward-looking sonar for depth approximation, designing a validation methodology against existing depth finders to lay groundwork for future mapping product development.

EDUCATION

Providence College September 2012 – May 2016
Bachelor of Science, Applied Mathematics · Minor: Computer Science
